

PEPTAXEL

PRICE LIST AND IMPLEMENTATION

CONCEPT

PEPTAXEL™

PEPTAXEL™ is a professional program designed as an alternative to standard microneedling, radiofrequency (RF) lifting, chemical peels, dermabrasion and laser skin treatments.

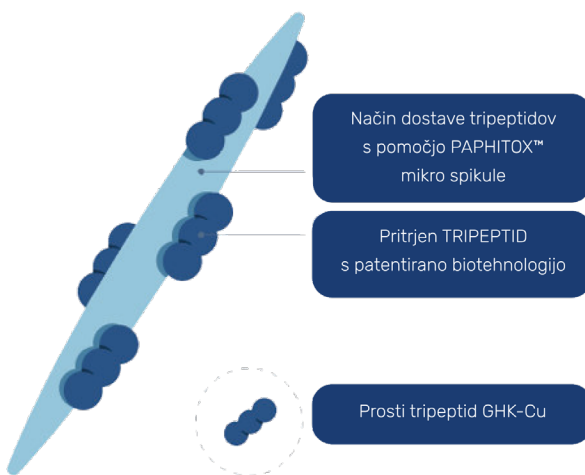

It is much safer and can be performed on almost any part of the face or body, which stimulates the natural production of collagen and elastin in the body, two essential proteins that maintain the elasticity and firmness of the skin.

RAPHITOX™

RAPHITOX™ is a unique substance in the form of a micro-needle, obtained from a natural marine source - sea sponges and subjected to a 9-step purification process. RAPHITOX™ is generally 200-250 µm in length and approximately 10 µm in diameter.

ALTUM™ PEPTIDE

Altum™ Peptide is the world's first patented biomaterial of marine origin in the form of a microcarrier that is smaller than pores and is absorbed 60 times better than conventional peptides. It consists of a Raphitox™ spicule to which tripeptides are bound by a special chemical process.

HOW TO USE?

EVALUATE THE SKIN INDICATION

Depending on the condition of the skin and the wishes of the client, it is best to choose PEPTAXEL™ SPIKUL POWDER first. For skin rejuvenation, choose Intensive Solution - VIOLA, and for acne reduction TR Solution - GREEN. Once your main indication has been chosen, focus on choosing the ACTIVATOR, namely, for classic skin deficiencies (lack of energy and hydration), the best choice is the Regeneration Activator - ORANGE, and in the case of hyperpigmentation, the Lightening Activator - YELLOW.

01

SKIN PREPARATION

Gently remove impurities from the treated area with a facial cleanser. After cleansing, use a cotton pad sufficiently soaked with toner to remove any remaining residue on the face and improve skin texture.

Do not exfoliate your face!

02

PEPTAXEL™ PROGRAM

Open the caps of the vial STEP 2 [activator serum] and vial STEP 1 [powder solution].

Pour the ampoule vial [STEP 2] into the powder vial [STEP 1] and mix them. Stir thoroughly with a spatula until the powder is completely dissolved.

Then install the funnel and firmly attach it to the vial.

GENTLE RUBBING 15 MIN

Apply the mixture to the skin, starting from the lower part of the face; jaws -> cheeks -> nose -> forehead (be careful around the eyes and mouth). Pay particular attention and gently massage areas where there is a lack of elasticity or wrinkles, such as nasolabial folds and wrinkles around the eyes.

Do not apply the ampoule to the entire face at once. Partially apply to the area and immediately RUB IN WITH GENTLE MOTIONS AND PRESSURE. During the massage, press with your fingertips to ensure that the "Altum™ Peptide" penetrates well into the skin.

*Rubbing the skin with this product may cause irritation and scratching. Please do not rub; press with your fingers instead!

04

05

MASK 10 MIN + CREAM

Apply the NRX bio-cellulose mask (Ribeskin) to the face without removing the previous PEPTAXEL™ mixture and leave it on for 10 min.

After 10 minutes, remove the mask and additionally lubricate the face with dermatological Ep+Plus Derm

CUSTOMER INSTRUCTIONS

IMMEDIATELY AFTER PEPTAXEL™ TREATMENT

After treatment with the Peptaxel™ program, we recommend that you do not use products containing microneedles or solutions based on AHA and BHA for 72 hours (3 days), as Altum™ Peptide remains active on your skin for another 72 hours and the micro-damages have not yet healed. The client should use Ep+Derm gel for the first 72 hours for soothing and faster healing.

Immediately after the treatment, you may experience temporary redness, warmth, or itching that may last up to 3 days. Rest and rest are recommended during these days.

Avoid heavy make-up on the day of the procedure and the following day. Avoid chlorinated pools, the sea, saunas and excessive exercise. Do not expose to the sun!

Be aware that NSAIDs (non-steroidal anti-inflammatory drugs) can suppress the natural inflammatory process that is key to healing, so avoid them for 7 days if possible.

DAY 3

For 3 days after the procedure, spray the skin frequently with moisturizing boosters to ensure sufficient hydration. The skin may become very dry. Use extremely light, moisturizing products.

Protect the treated area from the sun with at least SPF50. We recommend Repair Sun Serum.

Avoid prolonged direct exposure to the sun and artificial tanning.

For 3 days after the procedure, spray the skin frequently with moisturizing boosters to ensure sufficient hydration. The skin may become very dry.

DAY 5

For 5 days after the procedure, avoid activities that may cause facial redness, such as drinking alcohol, saunas, vigorous exercise, or other activities that may cause excessive skin heat, facial redness, irritation, or introduce bacteria.

DAY 7

7 days after the procedure, old dead skin cells will be exfoliated and skin regeneration will be activated. During this period, pay special attention to skin care.

When the dead skin is sloughed off, peeling and itching can occur. However, do not forcefully peel the skin or scratch it, as this may irritate the skin.

Avoid waxing, sugaring, electrolysis, threading, dermaplaning, laser/IPL treatments, chemical peels, skin peels and microdermabrasion in the treated area for up to 2 weeks.

CONTRAINDICATIONS

You should not have PEPTAXEL™ treatment if you have any of the following conditions:

- | | | |
|---|---|---|
| <input type="radio"/> Known allergy to any ingredient | <input type="radio"/> Fungal infection | <input type="radio"/> Open wounds |
| <input type="radio"/> Active bacterial infection | <input type="radio"/> Viral infection or inflammation | <input type="radio"/> Irritated or damaged skin |

Before having a Bio Microneedling treatment, consult your doctor or dermatologist if you have any of the following:

- | | | |
|--|--|--|
| <input type="radio"/> Pregnancy or breastfeeding | <input type="radio"/> History of skin diseases: skin cancer | <input type="radio"/> History: Keloid or raised scars |
| <input type="radio"/> Immunosuppression | <input type="radio"/> History of skin diseases: before malignant mole | <input type="radio"/> History of skin diseases: eczema, psoriasis, rosacea |
| <input type="radio"/> Using Accutane | <input type="radio"/> History of skin diseases: scleroderma | <input type="radio"/> History of skin diseases: actinic keratosis |
| <input type="radio"/> History of chronic diseases: diabetes | <input type="radio"/> History of chronic diseases: autoimmune diseases | <input type="radio"/> History of chronic diseases: heart disease |
| <input type="radio"/> History of chronic diseases: blood clotting problems | <input type="radio"/> History of chronic diseases: hormonal disorders | <input type="radio"/> History of chronic diseases: vascular diseases |

Waiting period before treatment with Bio Microneedling if you have had:

- | | |
|---|--|
| <input type="radio"/> Wait 1-2 weeks after IPL, laser hair removal and other light-based treatments (except resurfacing/ablation). | <input type="radio"/> Wait 6 months after finishing chemotherapy or radiation. |
| <input type="radio"/> Wait 2 weeks after Botox, HA-based fillers, waxing, microneedling, microblading, Innofacial, microdermabrasion, hydrodermabrasion, surface peels, prolonged sun exposure/tanning, or after discontinuing use of strong acidic products (tretinoin, AHA, BHA, etc.). | <input type="radio"/> Wait 6 weeks after laser and other resurfacing/ablation, moisturizing fillers (Sculptra, Radiesse) or medium/deep peels. |

1. HOW THE PEPTAXEL™ PROGRAM WORKS?

The treatment lasts 30-40 minutes. In just 5-10 minutes, up to 8 million natural silicate biomicroneedles are introduced directly into the skin layer with manual massage to stimulate skin metabolism and collagen regeneration. Compared to standard microneedling, there is much less pain, no bleeding, usually no anesthesia is required, and no skin breaks. The treatment shortens the skin cycle from an average of 28-40 days to approximately 7-14 days by activating basal skin cells and achieves natural, safe and effective physical rejuvenation.

2. HOW MANY TREATMENTS ARE NECESSARY AND HOW OFTEN?

For long-term and effective results on the face, a standard package of 5 repetitions (each treatment every 2 weeks) is recommended. Body parts (depending on condition) may require 6-8 repetitions. For more severe skin conditions, 2 to 3 treatment cycles may be necessary to achieve the best results. As we age and are prone to daily environmental aggressors, we recommend maintenance sessions every 8 to 12 weeks for long-term results.

3. IS BIO-MICRONEEDLING PEPTAXEL™ PAINFUL?

The treatment will feel like a stronger exfoliation, which will become more intense during the treatment. Towards the end of the treatment, be gentler and don't press too hard. If you have sensitive skin or areas that are particularly sensitive to pain, we recommend performing the test. Do this test 24 hours in advance either on the inside of the arm or behind the ear to gauge reaction and ensure product compatibility before regular application.

4. CAN PEPTAXEL™ TREATMENT BE COMBINED WITH OTHER TECHNIQUES?

Bio-Microneedling PEPTAXEL™ can be combined with the following therapies: light therapy, boosting serums specially designed for Bio Microneedling or Standard Microneedling applications, skin treatment with microcurrent or ultrasound.

5. WHAT IS THE RECOVERY TIME?

Day 1 to 3 – Tightness and slight swelling and transient itching, redness, burning, tingling, dryness and rough texture to touch. **Day 3 to 7** – Experience light to moderate peeling or peeling as part of the skin's renewal process. Oily or thick skin may peel more, dry or thin skin less. A small percentage of customers may experience a pro-inflammatory reaction (skin clearing or acne breakouts) and skin darkening, which is normal and will resolve over time. Altum™ Peptide and Raphitox™ bio-microneedles will not be absorbed, but can last up to 72 hours in the skin. After that, they will be removed with the fallen stratum corneum. Compared to traditional metal microneedles, the procedure is much easier and the risk of infection is greatly reduced.

Repair Sun Serum

PROTECTIVE SPF 50 AND MOISTURIZING SERUM 55 ml

The intensive serum uses a special 'encapsulation technology' in the production process instead of adding capsules separately. When UV blockers and active ingredients are encapsulated, they aid in efficient absorption upon contact with the skin and provide a unique application sensation.

Active Serum

RAPHITOX™ ACTIVE SERUM WITH 240.000 BIO MICRONEEDLES 30 ml

Anti-aging: focused care for deep wrinkles and fine lines, strengthening the skin's self-renewal process. Experience the moisturizing power of low-molecular hydrolyzed collagen water and the 8H complex. It offers immediate relief from skin irritation and repairs damage caused by UV rays.

All prices are without VAT.
